ESKOM DSM has announced that BMG is now a supplier of **energy efficient electric motors (EFF1)** for Eskom's National Energy Efficiency Programme. These motors can reduce electricity consumption by between 3% and 5%.

The latest technology used in the design and manufacture of **motors, gears & electronic controllers**, enables savings of up to 40% in operating expenses.

**Self adjusting motor bases** keep the V-Belt constantly tensioned thus avoiding slippage and saving up to 25% electricity consumption.

These **soft start couplings** reduce current absorptions and protect the motor and driven machine from jams and overloads.

Environmentally friendly **synthetic and speciality lubricants** offer a longer service life than conventional mineral oils and reduce mechanical wear and friction.
